

AN: PAT 1998-573415

TI: Computerised operation situation monitoring system for component production site has display unit which displays calculated statistical data stored by memory

PN: JP10255091-A

PD: 25.09.1998

AB: The system (1) has a calculation unit (11) to evaluate the input data that relates to a statistics. A memory (12) stores the evaluated statistical data. A display unit (2) then displays the stored statistical data.; Eliminates need for transmitting measurement data to higher order apparatus. Performs adjustment of manufacturing apparatus quickly by displaying statistical data. Enhances quality of conformance. Facilitates to perform predicted maintenance.
